

Assignment

SUMMARY

A Web application to look at other people's github activity. It will only load the recent activity of the user. Github activity api : [https://api.github.com/users/\\${username}/events](https://api.github.com/users/${username}/events)

Github activity public docs : <https://docs.github.com/en/rest/activity/events#list-public-events>

Problems being solved

1. Easy access to users github activities without loading the entire github page.

Procedure

- Create a homepage to show the recent activity of the user.
- Create a feature to search activity of any user by their github username.(use the history for autocomplete feature while searching).
- Create a feature to filter the recent activity of the user.
